

Dr Stefan Grümer

Vice-Chairman,
WFLD Organising Committee

Save the date

Dear colleagues, dear friends,

The preparations for the joint congress of DGL and WFLD in Aachen, Germany, are in full swing. To be celebrating the 30th anniversary of the International Society for Laser Dentistry (ISLD, founded in 1988) in Aachen, is a huge honour and motivation to make this event special.

Save the date
WFLD World Congress
1 to 3 October 2018 in Aachen, Germany

And that's the plan:

It is intended to be an international event of a high scientific level, with pronounced practical orientation. The possibilities of high-quality education of one of the most modern university clinics in Germany shall offer the appropriate setting.

An entirely new concept will be used to realise these intentions: In order to combine a maximum practical orientation medially with the corresponding background knowledge, high-quality scientific presentations of internationally renowned speakers on current developments of laser research—taking place in three auditoriums—will be linked with innovative live patient demonstrations accompanied by theoretical introductions and follow-ups of presentation teams.

In times of Ultra HD and multi-channel projection, the auditorium gets right up close to dentistry of the highest level being demonstrated with diverse wavelengths and devices—guaranteeing a maximum learning effect. Theory and practical experience will further be connected in the workshop events. Highly modern video-projection walls for poster presentations will last but not least promise interactive multi-media adventures, that have not existed in that manner before.

A large number of companies, not only of the field of laser dentistry, will be using the congress-accompanying exhibition to present their products and innovations. Well-known exhibitors have already agreed to participate.

For many laser-enthused colleagues from all over the world it will be “Coming back home to Aachen!” in October. For others the door to the world of laser is only just opening. I am looking forward to welcoming you all and, of course, the numerous friends from DGL, WALED and WFLD/ISLD here in Aachen—only your plentiful participation and active contribution will make this congress something special.

See you soon in Aachen,

Dr Stefan Grümer
