Fotona

A new generation of lasers, tailored for your practice

Fotona’s SkyPulse is a compact, portable and multifunctional Er:YAG dental laser that treats a wide variety of indications including endodontics, periodontics, peri-implantitis, caries removal, desensitisation and ceramic debonding. The SkyPulse platform features a special SSP mode for effective irrigation of the entire root canal, and SWEEPS technology (shock wave enhanced emission photoacoustic streaming) which enhances non-thermal photoacoustic shock waves generation, resulting in improved cleaning and debridement of the endodontic system. SkyPulse’s unique articulated fibre delivery makes the handling of the 360° swivel handpiece extremely flexible and virtually without resistance, eliminating fatigue and enabling easy access to any treatment site. In addition, with the latest technology graphical user interface, you can select preset options with a simple touch or adjust the treatment parameters with a simple swipe.

LASERVISION

The F42 frame with Quick Release and cold-malleable temple tips

The frame F42 complements the product family of the popular goggles F18 (flex temples) and F22 (standard temples) and features three major enhancements. The most important improvement affects the temple system, which now features an innovative quick-change system (Quick Release), which allows customers to easily change the frame if necessary, without tools or the risk of shield breakage. The other two improvements concern the folding temples, which now consist of one material that is especially resistant against disinfectant. In addition, they have a significantly improved ergonomics and fit due to the cold-malleable temple tips. For the new F42 frame almost all laser safety filters are available that were already used with the F18 or F22 frames. For more details and questions regarding the frame and its availability, your familiar sales engineers from LASERVISION GmbH & Co. KG are happy to support you. Laservision is one of the leading manufacturers of laser protection products. Their eye protection products are CE certified and comply at least with the applicable standards EN 207/208.
